Applies to Flush and Stile & Rail doors

## **ELIMINATION OF INTUMESCENT IN 20-MINUTE SINGLE SWING POSITIVE PRESSURE FIRE DOORS**

Based on an Engineering Evaluation (EEV) by Intertek/Warnock Hersey, single swing 20-minute positive pressure fire rated agrifiber core flush doors, stile & rail doors, and medium density fiber (MDF) profiled doors no longer require intumescent incorporated into the door.

The maximum size for agrifiber core flush doors is 4-0 x 9-0 (larger sizes up to 4-0 x 10-0 and doors in pairs require intumescent). The maximum size for stile & rail and profiled doors is 3-0 x 7-0 (larger sizes up to 4-0 x 8-0 and doors in pairs require intumescent).

Note: Doors going into frames in a drywall system require listed smoke and draft control gasketing.
