

# VTsmartdoor™

PROVIDING EFFICIENT AND  
RELIABLE FIRE DOOR INSPECTION

# HOW IT WORKS

Before they even leave our factory, a fire rating label with barcode is placed on the hinge stile of each door. This code is easy to access and tells inspectors the exact specifications of the door, including fire rating, machining, veneer, finish, manufacture date, door number and more. This gives the inspector all the information he or she needs in a matter of seconds.

The added bonus — this data can either be e-mailed or uploaded to our website. So if you ever need to replace or order more doors of the same specification, all the information you need is accessible in a matter of seconds.

## THE ENTIRE PROCESS TAKES ONLY A FEW STEPS:

### STEP 1:

Scan the barcode located on the hinge stile of the door. All of the information is automatically saved in the scanner.

### STEP 2:

Connect the scanner to a computer using the provided cable. Or, transfer the data wirelessly to your computer or Smartphone using Bluetooth technology.

### STEP 3:

E-mail an Excel file of the data to [vtsmartdoor@vtindustries.com](mailto:vtsmartdoor@vtindustries.com) or upload the file to [vtsmartdoor.vtindustries.com](http://vtsmartdoor.vtindustries.com).

### STEP 4:

All the door's data will be retrieved in a matter of seconds.

## KEY FACTS

- Inspector training and criteria are developed by DHI.
- VT will assist in inspector training.
- Using a computer or handheld device, door information can be e-mailed to [vtsmartdoor@vtindustries.com](mailto:vtsmartdoor@vtindustries.com) or uploaded and stored at [vtsmartdoor.vtindustries.com](http://vtsmartdoor.vtindustries.com).

For more information or to locate a local VT CORE Distributor visit [www.vtindustries.com](http://www.vtindustries.com).
