CONCEALED HOLDER APPROVED FOR 20-, 45-, AND 60-MINUTE POSITIVE PRESSURE FIRE DOORS

Based on successful fire tests at Intertek/Warnock Hersey in March 2004, VT can now offer concealed holders on 20-, 45-, and 60-minute positive pressure fire doors. The fire test was performed using a Glynn Johnson 100 Series concealed overhead holder. Other holders and hardware with similar size cutouts (1-3/8" wide x 3/4" deep x 17-3/4" long) are also allowed.

The fire doors require 1-1/2" Georgia-Pacific Firestop™ top rail with TechnoFire 2000 intumescent.
