

FACTORY FINISH NOTES

1. VT uses stain formulas and high-quality finishes on both our 5-ply wood veneer flush doors and stile and rail doors to ensure color uniformity.
2. WDMA TR-6 catalyzed polyurethane and WDMA TR-2 catalyzed lacquer (offered by our IDEAL Door Division) systems deliver outstanding consistency.
3. Each WDMA TR-6 coat is UV-cured in a controlled environment.
4. WDMA TR-6 and TR-2 factory finish systems utilize water-based stains on both our flush wood doors and stile and rail doors and the use of solvent-free sealers and topcoats on our flush wood doors eliminates harmful VOC emissions.
5. VT's factory finished and machined wood doors arrive at your jobsite ready to hang.
6. Refer to the VT Industries Factory Finishes brochure for standard color selections or consult the factory finish sample procedure for custom colors.
