

Stanford Medicine Outpatient Center

Project Profile:

Stanford Medicine recognized the need for outstanding ambulatory care in the Redwood City, California area and set to work to build a campus specifically dedicated to outpatient services and care. Just two short years later, the Stanford Medicine Outpatient Center welcomed patients and staff providing world class care in a beautiful, healing environment.

VT's Contribution:

VT Industries partnered with Fastrac Building Supply to provide the architectural wood door solutions for the nearly 360,000 square foot campus. Over 420 doors were manufactured for the project and featured crossbanded particleboard (5502H), crossbanded structural composite lumber (5508H), and Pyroforce® fire-rated cores. The doors achieved fire-ratings ranging from smoke non-rated up to 90-minutes.

Additionally, two different door looks were specified- a wood veneer look and a painted look. The wood veneer doors showcased beautiful AA grade, quarter sliced walnut veneers that were book and balance matched with a clear finish. The painted doors were factory primed opaque.
