

Warehouse Services, Inc.

Project Profile:

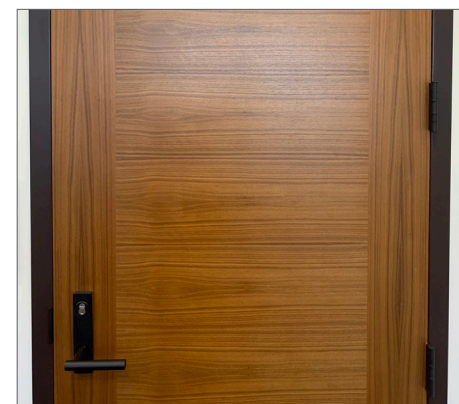

VT Industries partnered with local distributor, Architectural Sales, located in Evansville, Indiana, to manufacture 29 doors for Warehouse Services, Inc. (WSI). WSI is a privately held warehousing company and third-party logistics provider who recently relocated their operating headquarters to Mt. Vernon, Indiana.

Architectural Sales worked with the WSI team to help them select interior doors that enhanced the overall aesthetic of their new office space. Architectural Sales chose VT Industries for the job based on their ability to deliver high-quality door products and their custom capabilities. VT was able to meet and exceed the expectations set forth by the architect and designer with their Heritage Collection doors.

VT's Contribution:

Within the new WSI business office lie 29 unique and beautiful VT sketch face flush wood doors. Flush doors with sketch faces were selected as an alternative to true stile and rail door construction for the project.

The following door types are featured: sketch face flush doors with full lites and louvers, sketch face flush barn doors with reveals, and sketch face flush doors that feature vertical veneer orientation on the door stiles and a horizontal veneer orientation on face and door rails. Quarter sliced walnut veneers with a custom finish were selected to unify the diverse door elevations throughout the space.
