

235 Van Buren

Project Profile:

235 Van Buren is a 46-story residential building located in the "loop" of Chicago. The distinctive tower features one- to three-bedroom condos appointed with the finest premium finishes, as well as floor-to-ceiling windows that provide panoramic views of Lake Michigan or Chicago's dynamic cityscape.

Building Challenge:

The building called for high-design doors that would live up to its luxurious and indulgent atmosphere. Additionally, the doors needed to provide superior performance to meet the heightened code requirements of multi-family residential applications.

The high-traffic corridors required doors with enhanced durability and scuff resistance.

The project's high-security needs were met with flush wood veneer doors featuring the highest security rating possible (Class 40).

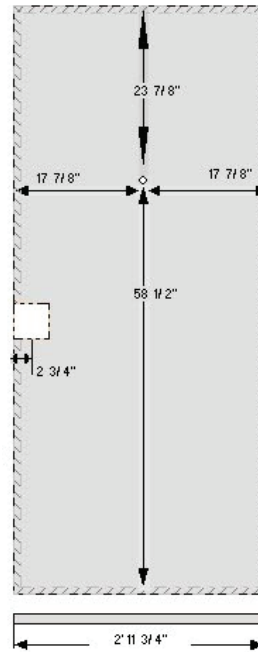

The upscale architectural aesthetic called for distinctive, premium doors.

VT's Contribution:

VT Industries supplied over 700 Flush Wood Doors that feature plain sliced natural birch veneers with a custom finish. The doors blend seamlessly with the contemporary interior design scheme.

We make beautiful, high-performing doors.

The custom design and superior performance of the VT doors lived up to 235 Van Buren's luxurious standards.
